

## TI115 – IGP-LivingSurfaces (Group D)

### Cleaning recommendations

For the Cleaning of IGPLivingSurfaces surfaces, we recommend pre-cleaning with a wetting agent solution using a double-disc cleaning brush equipped with washing brushes (e.g. Nilco brand with associated "Natural" washing brush, Fig. 1).

Subsequent cleaning of the loosened particles and removal of the foam is carried out by manual brush cleaning with light pressure from the top layer of the framework downwards. Then rinse thoroughly with plenty of water. The use of a high-pressure cleaner should be avoided, as moisture could accumulate between the joints.

Collection and discharge facilities for the dirty water produced must be available in accordance with municipal or regional authority regulations.

We recommend periodic maintenance cleaning; regular cleaning intervals are essential to prevent stubborn soiling. Cleaning agents and methods should always be tested in advance on test areas!

We recommend consulting directly with a certified façade cleaner to determine which cleaning products are most suitable for each individual case.

This recommendation applies to the following product groups with the article designations:

591TA..A81

591TC..A81

Information on leading service companies for high-quality cleaning of metal facades in your region can be obtained from the responsible IGP sales organisation.

## Facade cleaners in your region

Rudolf Ambruch Fassadenpflege GmbH  
Esperantostraße 12
