IGP POWDER COATINGS

References

Hotel and residential area Adenauerallee

The Adenauerallee forms part of the main road leading from Hamburg city center to the Berliner Tor in the St. Georg district. High-rise buildings up to 90 meters tall characterize this street, while the skyline in the neighboring district is significantly lower. In terms of the building heights and dimensions, the planned structures on the plot are designed to harmoniously integrate with the existing urban context.

IGP POWDER COATINGS

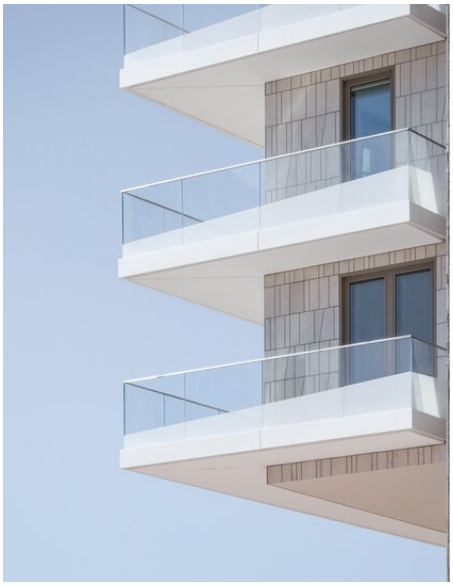

IGP POWDER COATINGS

Details

The overall project comprises a 55-meter-tall high-rise building with 113 residential units on 17 floors, as well as a 4-star hotel with 277 rooms in a seven-story block. In terms of urban development, the complex will close the gap between Lindenstrasse and Böckmannstrasse. The magnificent building was finished with 1.5 tons of IGP powder coating, applied to the window profiles and panels.

In addition, colors 4201A 83045A10 & 4201A76535A10 were used by visionary architect Le Corbusier. Le Corbusier developed a purist chromatic system for objects and architecture. This impressive palette creates harmony between selected colors. The system combines shades from nature with the psychological and spatial effects of specific colors. Coloration, space, and proportions are perfectly balanced.

The architectural images were provided by photographer Rainer Taepper.
