IGP POWDER COATINGS

Details

Various colors of the IGP-DURA®xal 4201 powder coating system were used in the construction of the 3M office building in Rüschlikon, representing all the different variants of bronze. A total of 4 different powder coatings were used to coat façade components such as window frames and sun protection. This targeted selection of colors and coatings gives the building a unique aesthetic and underlines its modern appearance. The use of these special powder coating systems is not only for aesthetic purposes, but also to protect high-quality materials and ensure their longevity. The coatings provide effective protection against the effects of weathering and help to keep the façade elements in optimum condition. The harmonious integration of the different shades of bronze into the façade design emphasizes the modern appearance of the 3M office building in Rüschlikon while creating an appealing visual variety. These carefully selected details help to complete the overall architectural concept and enhance the attractiveness of the building.

The architectural images were provided by photographer Roger Frei.
