IGP POWDER COATINGS

Details

During the construction of the Markthalle campus in Brugg, two different powder coating systems were used for the window frames. A total of 5576 kg of powder was used to ensure that the window frames were protected from all weather conditions. The brown color of the window frames provides an appealing contrast to the bright white of the facades of the campus. The decision to use the IGP powder coating system contributes significantly to the longevity of the window frames, ensuring the long-term quality and aesthetics of the building. This careful selection and application of the powder coating systems underlines the commitment to high quality construction and the protection of the architectural elements from the effects of the environment.

The architectural images were provided by photographer René Rötheli.
