IGP POWDER COATINGS

Details

A total of 2,000 kg of the high-quality **IGP-DURA**®*xal* 4201E82291A3F powder coating system was used for the construction of the Skypark. This special coating technology played a decisive role in the design and protection of various components of the Skypark complex, including window frames, façade parts and other architectural elements. The **IGP-DURA**®*xal* 4201E82291A3F powder coating system is characterized by its outstanding weather resistance and durability properties, which are particularly important considering that the Skypark is exposed to the changing climatic conditions in Bratislava. From icy winters to hot summers, this powder coating system provides reliable protection against corrosion, fading and other environmental influences, significantly reducing maintenance costs over the lifetime of the building. In addition to its protective function, the **IGP-DURA**®*xal* 4201E82291A3F powder coating system also adds aesthetic value. The color and subtle pearlescent effect harmonize perfectly with the other materials of the façade, contributing to a visually appealing overall appearance. The smooth and even surface of the powder coating also gives the coated parts a sophisticated and modern look that underlines the contemporary design of the Skypark. The use of the **IGP-DURA**®*xal* 4201E82291A3F powder coating system for the Skypark was therefore not only a practical decision, but also an aesthetic one.
